Nucleic acids encoding plant transcription factor polypeptides, useful for altering the sugar sensing characteristics of plants and increasing yield, e.g. corn, potato and cotton plants -

Claim 4; Page 90-92; 151pp; English.

factors which may be used to modify phenotype associated with a plant's factors which may be used to modify phenotype associated with a plant's sugar sensing characteristics and increasing yield when their expression level is altered. Sugars are central regulatory molecules that control aspects of physiology, metabolism and development. Therefore the cDNAs and proteins of the invention are useful for modifying the growth and and proteins of plants, photosynthesis, altrowthate metabolism, crespination, starch and sucrose synthesis and degradation, pathogen response, wounding response, cell cycle regulation, pigmentation, it cresponse, wounding response, cell cycle regulation, pigmentation, cresponse, wounding response, cell cycle regulation, pigmentation, creationships in seeds, tubers, roots, and other storage organs leading to an increase in yield. The transcription factor polynucleotides and polypeptides may be used to alter the structure and developmental characteristics of plants such as soybean, wheat, corn, potato, cotton, rice, oilseed, sunflower, alfalfa, sugarcane, turf, banana, blackberry, ciec, oilseed, sunflower, alfalfa, sugarcane, turf, banana, blackberry, cofton, papaya, peas, peppers, pineapple, spinach, squash, sweet corn, onlon, papaya, peas, peppers, pineapple, spinach, squash, sweet corn, condto, watermelon, rosaceous fruits and/or vegetable brassicas.

Patent No. 575677

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Colgin, Mark
TITLE OF INVENTION: 511k Proteins
NUMBER OF SEQUENCES: 56
CORRESPONDENCE ADDRESS:
ADDRESSEE: Birch, Stewart, Kolasch & Birch
STREET: P.O. Box 747
CITY: Falls Church
STATE: Viginia
                                                                                                                                                   COMPUTER READABLE FORM:

Patent No. 5736378

GENERAL INFORMATION:
APPLICANT: Blder, John R.
APPLICANT: Talbott, Randy L.
TITLE OF INVENTION: NUCLEOTIDE SEQUENCE AND OPEN READING
TITLE OF INVENTION: FRAMES OF FELINE IMMUNOBEFICIENCY VIRUS (FIV)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 33.6; DB 1; Length 2793; Pred. No. 4.4; 0; Mismatches 59; Indels 0.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HAME/KEY: CDS

Listing first 45 summaries

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

           Anote—"Vector: piluescript SK-; Site_1: EcoRI; Site_2: Xnoie—"Vector: piluescript SK-; Site_1: EcoRI; Site_2: Xnoi: cDNA was prepared from polyA+ enriched RNA from effective root nodules harvested one month post incoulation with Sinorhizobium meliloti. The CDNA was directionally ligated into the Uni-ZAP XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda ZAP phage using Ex-Assist helper phage and propagated in XLOLR cells."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               416 ggteggtttgacattttgtetttgaceggtactgegettecaeegeetgeaecaeeggga 475

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               //issue_type="N2-fixing root nodules"
//dev_stage="effective root nodules harvested one month
post incoulation with Sinchitzoblum melilot;
//dab_nost="E. col; strain XLOIR"
//note="Vector: pBluescript SK-; Site_1: EcoR; Site_2:
Xhoi; cDNA was prepared from polyA+ enriched RNA from
effective root nodules harvested one month post
incoulation with Sincrhizoblum meliloti. The cDNA was
stratagene and porchizoblum meliloti. The cDNA was
stratagene and postaged using Gloapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-ZAP phage using Ex-Assist
helper phage and propagated in XLOIR cells."

ESTS from one month old nitrogen-fixing root nodules of Medicago
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             EST316591 GVN Medicago truncatula cDNA clone pGVN-50F8, mRNA
       Anote—"Vector: pBluescript SK -: Site_1: EcoNI; Site_2:
XhoI: cDNA was prepared from polyA+ enriched RNA. The cDNA
was directionally ligated into the Unizap XR vector from
Stratagene and packaged using Gigapack III Gold packaging
strates. Plasmids containing cDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in XLOLR cells."

/note="Vector: pBluescript SK-; Site_1: EcoR; Site_2:
XhoI: cDNA was prepared from polyA+ enriched RNA from
effective root nodules harvested one month post
incoulation with Sinchizobium meliloti. The cDNA was
directionally ligated into the Uni-ZAP XR vector from
extracts. plasmids containing cDNA inserts were excised
from the recombinant lambda-ZAP phage using Ex-Assist
helper phage and propagated in XLOLR cells."

The transcription factors are used to modify traits associated with structural or developmental characteristics of plants, e.g. soybean, wheat, corn, potato, cotton, rice, oliseed rape, surflower, alfalfa, sugar cane, turf, banana, blackberry, blueberry, strawberry, raspberry, cantaloupe, carrot, cauliflower, coffee, cucumber, eggplant, grapes, honey dew, lettuce, mango, melon, papaya, peas, watermelon, pineapple, spinach, squash, sweet corn, tobacco, tomato, peppers, onlon, rosaceous fruits and/or vegetable brassicas when their expression levels are altered. The manipulation of transcription factor levels in plants offers great potential in agricultural biotechnology for modifying plant's traits. The transcription factors are also used in gene therapy.
                                                                                                                    <u>ب</u>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Transcription factor; flowering time; transgenic plant; vernalisation; plant development; plant physiology; flowering.

```
New transgenic plant comprises a recombinant polynucleotide encoding a plant transcription factor polypeptide and has a modified flowering time or vernalization requirement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a plant transcription factor protein which modifies the flowering time of a plant. The polynucleotide sequence is used to produce transgenic plants which have a modified sequence is used to produce transgenic plants which have a modified by protein time or a modified vernalisation requirement. The polynucleotides and polypeptides are useful for modifying plant development, physiology or blochemistry such that the modified plants have a trait advantage over wild type plants. In particular they are useful for accelerating, delaying or preventing flowering. The polynucleotides are also useful as nucleic acid probes and primers. They may be used to identify proteins that can modify the activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 LRSHVLEVTSGSDISEAVSTYATRRGCGVCIISGTGAVTNVTIRQPAAPAGGGVITLHGR 120

-!- SUBCELLULAR LOADIN. Nuclear (Potential).

- ISSUE SPECIFICITY: MESODERA.

-!- DEVELOPMENTAL STACE: FIRST DETECTABLE IN THE PRESUMPTIVE MESODERA.

-!- DEVELOPMENTAL STACE: FIRST DETECTABLE IN THE PRESUMPTIVE MESODERA PRIOR TO THE SPLITTING PROCESS THAT GENERATES THE SOMATIC AND VISCERAL/ HEART HESODERA. AFFER THE SUBDIVISION. IT IS FOUND IN BOTH THE SOMATIC AND THE VISCERAL/HEART MESODERA.

-!- INDUCTION: TWI ACTIVITY IS REQUIRED FOR MEP? EXPRESSION. SNA ACTIVITY IS NEEDED FOR MAINTAINING MEP? EXPRESSION.

-!- SIMILARITY: BELONGS TO THE MADS DOMAIN FAMILY OF TRANSCRIPTION
                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=94329547; PubMed=8052612;

SINGLELANDOUS: THE SEGMENT H5 IS THOUGHT TO LINE THE CHANNEL PORE.

SINILARITY: TO THE MEMBERS OF THE POTASSIUM CHANNEL PROTEINS
OF THE SH SUPERFAMILY.

SIMILARITY: CONTAINS I CYCLIC NUCLEOTIDE-BINDING DOMAIN.

SIMILARITY: CONTAINS I PAS (PER-ARNT-SIM) DIMERIZATION DOMAIN.

SIMILARITY: CONTAINS I PAS-ASSOCIATED C-TERMINAL (PAC) DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Drosophila melanogaster (Fruit fly).
